Poly Wall® Building Solutions is an innovator of high quality, cost effective, engineered Building Materials. We stand behind our brand promise — Moisture and Air Stop Here.* Visit our website at www.poly-wall.com for the full array of product offerings.

DESCRIPTION
Poly Wall® Home Stretch™ Peel ‘N Stick Membrane is specifically designed and engineered for use with Insulated Concrete Forms technology. (ICF) It is also an excellent choice for use on poured concrete foundation walls, Concrete Masonry Unit (CMU) walls and related applications where waterproofing is critical or hydrostatic pressure is present. Home Stretch Peel ‘N Stick is a self-adhering sheet waterproofing membrane 40 mils thick which consists of a strong pliable high density polyethylene (HDPE) facing bonded to a rubberized asphalt waterproofing compound that has been proven over many years of use to be a supremely effective waterproofing. Home Stretch Peel ‘N Stick is available in easy to handle and install 36’ wide by 66.7’ long rolls (200 sf / roll) with a disposable treated release liner. Detail tape, Primer, Joint Filler and Drainage products are available to complete a full waterproofing system.

ADVANTAGES
- Factory controlled 40-mil uniform and consistent thickness.
- Side lap design delivers increased watertightness.
- Extended selvage edge provides asphalt-to-asphalt adhesion at the seam.
- Appropriate for use with both Expanded and Extruded Polystyrene ICF Systems.
- High Tensile Strength with terrific flexibility.

INSTALLATION
The sequence of installation is:
- Be sure all ICF surfaces are clean and dry.
- Apply PolyWall Blue Barrier 2200 STPE based Joint Filler as a 3/4-inch fillet and install the 12-inch membrane detail strip at footing, rolling or pressing into place.
- Starting at bottom align and apply first vertical piece of Home Stretch Peel ‘N Stick Membrane on wall. Apply subsequent pieces on and along the remainder of the wall. Roll to remove air pockets.
- Apply PolyWall Blue Barrier 2200 Joint Sealer at top termination of membrane and around all penetrations in wall.
- Apply PolyWall Arroyo Drain Board and accessories for drainage and protection of your waterproofing investment.

WHY USE POLY WALL® HOME STRETCH™ PEEL ‘N STICK?
- 60+ years of successful waterproofing experience
- Superior protection of your ICF investment
- Superior durability, puncture resistance and tensile strength
- Works right away upon installation, don’t have to wait for product to cure for waterproofing to be effective
- Cleaner than liquid products and safer than torched applied sheet goods
- Complete line of complimentary products to confidently complete your project
- Poly Wall is an employee owned company, where employees expect more of themselves and the company
- Made in the USA

STORAGE
Membrane and accessories should be unloaded and stored carefully. Protect cartons and containers from weather, sparks, flames, excessive heat, cold and lack of ventilation. DO NOT stack membrane material higher than 5-feet vertically, nor double stack pallets. Store cartons on pallets and cover to prevent water damage. For best results, store membrane above 50° (10°C) prior to application.

LIMITATIONS
- Make sure caulks, and sealants which might come into contact with the adhesive portion of rubberized asphalt do not contain plasticizers or solvents. This includes most polyurethane and silicone caulks
- Good practice calls for membrane to be covered within 30 days of installation
- Adhere to minimum cure time requirements of sealants when applying to polystyrene foam
- Prohibit flames, sparks, welding and smoking during application

LIMITED WARRANTY: We, the manufacturer, warrant only that this product is free of defects, since many factors which affect the results obtained from this product are beyond our control; such as weather, workmanship, equipment utilized and prior condition of the substrate. We will replace, at no charge, proven defective product within twelve (12) months of purchase, provided it has been applied in accordance with our written directions for uses we recommended as suitable for this product. Proof or purchase must be provided.

INSTALLATION GUIDELINES FOR POLY WALL® HOME STRETCH™ PEEL ‘N STICK MEMBRANE ON A ICF (INSULATED CONCRETE FORM) SYSTEM

The installation guidelines provided below are not intended to be full and complete application instructions. For full Home Stretch application instructions scan here.

STEP 1 - Clean & Prepare Rough Opening
A. Clean ICF with Stiff Broom.
B. Power wash hard to remove debris and expanded polystyrene dust if any.
C. Prime hard to clean ICF surfaces with Shur-Tac water based liquid adhesive.
D. Fill in any cracks or indentations with Poly Wall Blue Barrier 2200 Joint Filler.

STEP 2 - Detail Footing & Wall
A. Apply a 3/4” fillet of Poly Wall Blue Barrier 2200 Joint Filler on inside corners and at the vertical wall/ footer interface.
B. Prior to Detail Tape being applied, prepare surface at corners and footer with Shur-Tac adhesive at a rate of 250-300 sf/gallon.
C. Apply 12” wide Poly Wall Home Stretch Detail Tape vertically on inside/outside corners and horizontally on the footer itself.

STEP 3a - Install Corners (Outside Corners)
A. Cut and fit a piece of 12” membrane to outside corner. Applied over ICF prepared with Shur-Tac liquid adhesive.
B. Apply Poly Wall (PW) Blue Barrier 2200 Joint Filler to all cut edges & terminators on membrane on

STEP 3b - Install Corners (Inside Corners)
A. Apply a 3/4” fillet of Poly Wall Blue Barrier 2200 both vertically and horizontally at corners of ICF.
B. Allow 2 hours before application of membrane.
C. Cut & fit a piece of 12” membrane to inside corner applied over ICF prepared with Shur-Tac.

STEP 4a - Apply Membrane
A. Starting from the lower foundation base and rising to the top of the wall, come over and above the wall by 6”.
B. If you choose to terminate the membrane on the vertical surface apply a termination bar (supplied by others). Firmly press the termination edge with hand roller and protect with a generous bead of Poly Wall Blue Barrier 2200 Joint Filler.
C. Align & apply first roll of membrane starting on one end, align subsequent rolls, maintain a min of 2 1/2” side laps and 6” on staggered end laps.
D. Apply membrane from top of the wall over the edge of the footing at the foundation base.
E. Use heavy hand pressure while smoothing out the membrane surface as its applied - roll installed membrane with a hand roller to complete bond.

STEP 5 - Finish & Protect Membrane
A. Apply Poly Wall Blue Barrier 2200 at all terminations and cut membrane.
B. Install protection board (Arroyo Drain Board or by others) as required. Apply with “spot” adhesive compatible with polyethylene surfaces and the protection board you select.

STEP 6 - Back Fill
A. No waiting is necessary before backfilling.
B. Fill material should be free of large clumps, rocks tree roots and debris.
C. Place backfill in no more than 12’ lifts and mechanically compact to 90% proctor.
D. Completely cover exposed membrane with fill material. In case of additional exposed membrane cover with suitable protection course or veneer products such as Architectural Stone.
